

ZARA Sales Analysis — June 2026

Data analysis project by Rakesh Gope. Tools: Python | BigQuery SQL | Power BI. Purpose: turn sales data into actionable merchandising, promotion, and inventory decisions.

Project Snapshot

Scope

Analyze Zara product-level sales to identify trends, promotion effects, and placement impact.

Questions

Which factors drive sales? How effective are promotions? Which categories and positions perform best?

Deliverables

Cleaned dataset, SQL scripts, Power BI dashboard, recommendations.

Dataset Overview

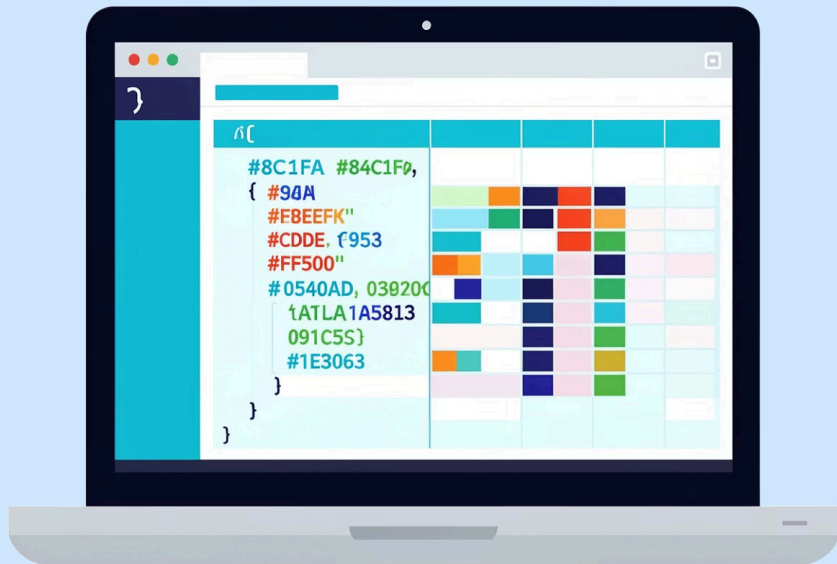

Item		A	B	XS	#S	\$S
1		40	2	#841IX	60021	\$901
2		4	4	#EBEEFA	#CDDAFA	\$400
		31	3	#F8EFC	▼	\$500
5		\$0	10	\$S50	F578DE	\$2109C
7		4	0	\$S90	FF5000	#FF500
4		#33	2	\$3100	■	#0540AD
7		\$50	30	3140	■	#1E50AD
8		\$3	1	\$2490	■	#1A501C
5		\$93	1	#63090	■	091C53
2		40	4	460	■	#E3063

Key attributes

- Product ID, Name, Category, SKU
- Sales Volume, Promotion Flag, Seasonal Flag
- Product Position, Section (Men/Women), Brand, Scraped Date

Total products analyzed: 250

Data Preparation (Python)

Cleaning

Loaded into pandas, standardized columns, converted dates, removed records missing names/descriptions.

Quality Checks

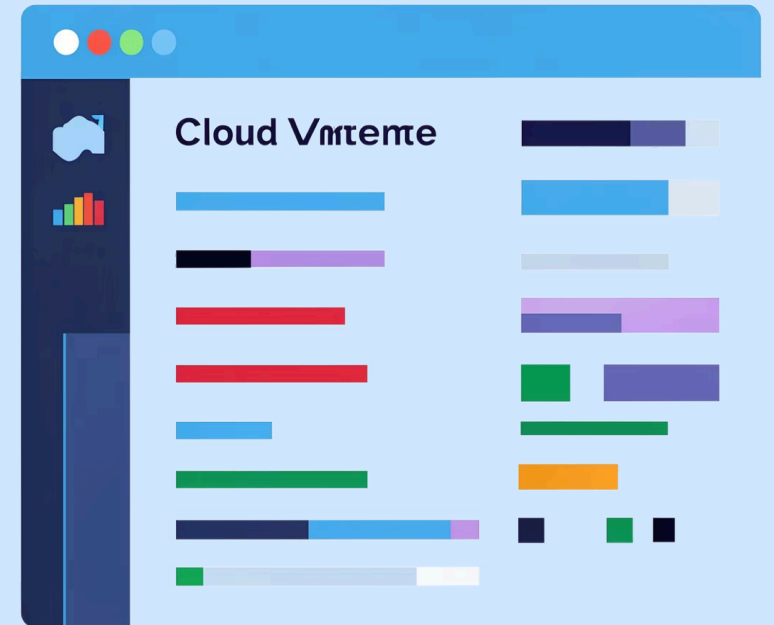

Duplicate detection, missing-value review, distribution checks, outlier inspection (IQR).

Feature Engineering

Created Promotion Flag, Seasonal Flag, Sales Category. Export: zara_sales_cleaned.csv

SQL Analysis (BigQuery)

Uploaded cleaned dataset to BigQuery to run analytical queries exploring top sellers, promotions, position, seasonality, categories, and sections.

Top Findings — Performance Highlights

Plaid Overshirt

Highest-selling product —
~10.9K sales volume.

Jackets

Top-performing category
by total sales volume.

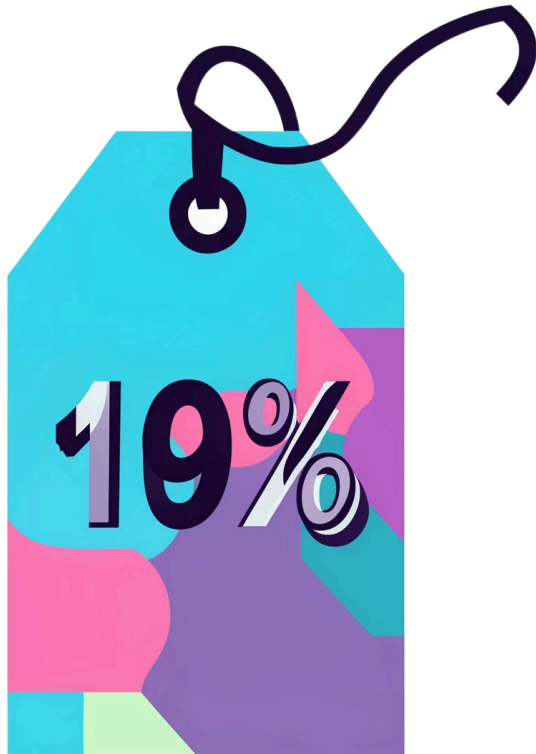

Jeans

Lowest sales volume
among analyzed
categories.

Promotion & Seasonality Insights

Promotion Impact

Average sales for promoted vs non-promoted products are nearly identical (~1.8K), suggesting limited promotion lift overall.

Seasonality

Seasonal and non-seasonal products contributed almost equally, indicating limited season-driven variance in total sales.

Placement & Section Analysis

- **Product Position**

Aisle placements generated the highest sales; front-of-store placements produced the lowest sales among positions analyzed.

- **Section Performance**

Men's section significantly outperformed Women's, accounting for the majority of total sales.

Power BI Dashboard

The interactive dashboard visualizes KPIs and supports filtering by promotion, season, position, section, and category to explore trends.

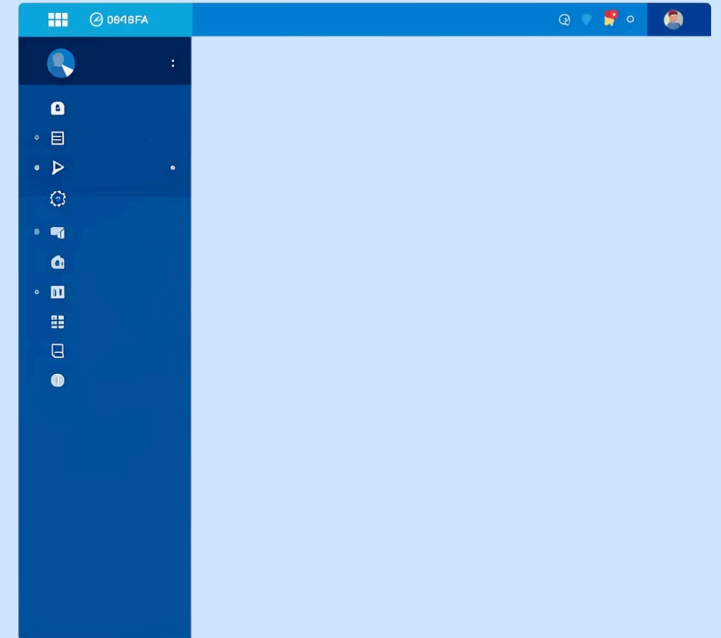

KPI Cards

Total Products, Total Sales, Average Sales, Highest Sales

Filters

Promotion, Seasonal, Position, Section, Category

Recommendations & Next Steps

1

Inventory

Increase stock for high-performers (jackets, top overshirts); prioritize inventory for Men's section.

2

Merchandising

Favor aisle placement for products with high sales potential; re-evaluate front-of-store strategies.

3

Promotion Strategy

Run deeper A/B promotion tests and explore personalized campaigns—current promotions show minimal lift.

4

Customer Segmentation

Analyze buyer segments by section and category to enable targeted marketing and assortment optimization.

5

Next Steps

Operationalize dashboard for stakeholders; schedule iterative tests and monitor KPIs monthly.
